

PERIODONTAL RE-EVALUATION

PURPOSE: Evaluate success of initial periodontal therapy; decide on next phase of tx based on patient desires and clinical needs.

TIME FRAME: 4-8 weeks following completion of last quadrant of SRP.

INFORMATION TO GATHER:

- Complete perio data collection of entire mouth, including; probing, BOP, furcations, plaque, occlusion, FGM, mobility, etc..
- Medical history: systemic issues and recent changes
- Oral hygiene skills and habits

SYNTHESIZE
ANALYZE
EVALUATE

MAINTENANCE

- Pockets stabilized
- Plaque decreased
- Infection controlled
- HC skills improved

- Establish maintenance frequency
- Consider/update restorative plan

Re-assess periodontal condition at each maintenance appointment

RE-TX

- Residual calculus
- High plaque index
- Data indicates localized areas not responding
- Disease indicators still present
- Defer restorative?

RE-EVALUATE

REFER

- Limited or no resolution of disease
- Increase in disease indicators

- Surgical correction needed for restorative plan (implants, CL, ST graft, etc.)
